

1. Introduction

TC101 was created for IT and Operation Leaders in the Transportation & Logistics, Postal, Retail, and Field Service who are facing the pressure of rising demands on a tight budget and understand that the choice of frontline technology has never been more critical. When your team's performance and operational reliability are on the line, settling for low-cost suppliers or consumer grade devices introduces hidden costs, disruptive downtime, and support challenges. **The TC101 Touch Computer is your answer.**

It's more than just a device; it's your affordable entry into the trusted Zebra ecosystem which provides fewer disruptions, greater confidence and a partner you can count on every step of the way.

TC101 is built with attention to detail — sporting an 8-core Qualcomm processor, 6 GB DDR5 memory, launching with Android 15, and with hardware service life until 2032. It is a significant upgrade over the TC15 series of products, and we can't wait to get TC101 into the hands of our customers to power their frontline.

TC101 will follow the TC15 purchase model, it is orderable in multiples of the minimum order quantity specified for each SKU.
