The transceivers listed in this document represent the currently available and End of Sale products at the time of this publication. Not all transceiver products are supported in every switch available from Aruba. Consult the datasheets for the applicable switch product for a list of supported transceiver products. Datasheets can be found at <https://www.arubanetworks.com/resources/product-and-solution-information/>.

How to use this Guide

Read this Overview chapter for basic understanding of technologies and features, such as split ports and breakout cables.

- Find the chapter with the port type you are interested in – usually related to the speed of the interconnect:
 - QSFP28 = 100G
 - QSFP+=40G
 - SFP56 = 50G
 - SFP28 = 25G
 - SFP+ = 10G
 - SFP=1G, 100Mbps
- See the details of the Transceiver, DAC or AOC including wavelength and distance supported over which type of medium.
- Find the switch of interest, and note the minimum software version required to support the transceiver, DAC, or AOC and any exceptions (such as limitations to select ports or port configuration requirements)
- HPE Server and Systems, HPE Storage interconnect products (DACs, Split DACs/AOCs) are noted.

Conventions

This section describes the conventions used in the documentation.

Note on product images

Product images in this guide may differ from actual product.

Port numbering in examples

The port numbers in this document are for illustration only and might be unavailable on your device.

Types of transceiver modules and network cables

Table 1: Types of transceiver modules and network cables

Transceiver module type		Connector head
QSFP28 module (transceiver)	QSFP28 optical transceiver module	MPO 12-strand or LC 2-strand
	QSFP28 DAC (copper cable for interconnecting devices) 1m to 5m reaches	Twinax cable permanently attached
	QSFP28 AOC (Active Optical Cable for interconnecting devices) 7m to 30m reaches	Optical cable permanently attached
QSFP+ module (transceiver)	QSFP+ optical transceiver module	MPO 12-strand or LC 2-strand
	QSFP+ DAC (copper cable for interconnecting devices) 1 - 5m reaches	Twinax cable permanently attached
	QSFP+ AOC (Active Optical Cable for interconnecting devices) 7m to 30m reaches	Optical cable permanently attached
SFP56 module	SFP56 optics (50G) and 50G AOCs	Will be available in the future; awaiting market viability
	SFP56 DAC (copper cable for interconnecting devices)	Twinax cable permanently attached
SFP28 module	SFP28 same size as SFP+ (optical)	LC 2-strand
	SFP28 DAC (copper cable for interconnecting devices) 0.65m to 5m reaches	Twinax cable permanently attached
	SFP28 AOC (Active Optical Cable for interconnecting devices) 3m to 15m reaches	Optical cable permanently attached
SFP+ module (transceiver)	SFP+ optical transceiver module	LC 2-strand or 1-strand (for BiDi)
	SFP+ DAC (copper cable for interconnecting devices)	Twinax cable permanently attached
	10GBASE-T copper transceiver module	RJ-45 (Requires Cat6a for maximum supported distances. Shielded 6a cable recommended to eliminate EMI issues.)
Small form-factor pluggable (SFP) module (transceiver)	100-Megabit SFP optical transceiver module	LC 2-strand
	Gigabit SFP optical transceiver module	
	1G SFP copper transceiver module	RJ-45 (1G requires Cat5e for maximum supported distances.)

The available transceiver modules and network cables vary by device models and are subject to change over time. For the most up-to-date list of transceiver modules and network cables, contact your Aruba sales representative or technical support engineer.

For information about the transceiver modules and network cables available for each device model, see the Datasheets or QuickSpecs for the applicable switch product. Refer to the tables within this guide for the specific switch model.

Data rate

Data rate is the number of bits transmitted per second. The unit of measure for data rate is Megabits per second (Mbps) or Gigabits per second (Gbps). Transceiver modules, optical, Direct Attach over Copper (DAC), and Active Optical Cables (AOC) products provide the following levels of data rates:

- 100 Gbps (optical, DAC, and AOC)
- 50 Gbps (DAC and SR only at this time)
- 40 Gbps (optical, DAC, and AOC)
- 25 Gbps (optical, DAC, and AOC)
- 10 Gbps (optical, DAC, and RJ45 10GBASE-T)
- 1000 Mbps (also known as Gigabit) (optical and RJ45 1GbT)
- 100 Mbps (also known as Fast Ethernet) (optical only)

Transmission distance

Through UTP or STP cables, signals can be transmitted over a distance of 100 m (328.08 ft.) only. This behavior occurs because signals attenuate during transmission through the UTP cables.

Attenuation refers to the dissipation of the power of a transmitted signal as it travels over a cable.

Attenuation occurs because signal transmission suffers certain resistance from the cable, which weakens the signals as they travel over the cable. When signals are transmitted over a long distance, signal strength decreases significantly, causing the signal-to-noise ratio to drop below the accepted level. This decrease makes it impossible to distinguish between signals and noise, which results in data loss.

Patch panel and punch down blocks also affect attenuation; that is, they can be a source of issues resulting in shorter distances or data loss.

10GBASE-T connections require Category 6a as a minimum for proper 10G speeds up to the 100m distance dictated by the IEEE 802.3ae standard for a fixed 10GBASE-T port. The JL563A/JL563B transceiver has a limit of 30m max distance due to limited power available to the transceiver (vs a fixed 10GBASE-T port). Anything less (Cat 6, 5e, 5) will compromise the distance that 10G over copper can achieve.

Shielded Twisted Pair (STP) Cat 6a cable is recommended when using the 10GBase-T transceiver (JL563A/JL563B).

Use of STP prevents EMI events from affecting data traffic carried on the wire - known as Crosstalk or Alien Crosstalk. Large EMI events from electronically noisy environments may be coupled onto unshielded cabling and cause temporary packet errors. Fixed 10G ports have designs to counteract these types of bit error conditions, that the 10GBASE-T transceiver cannot counteract consistently. Using STP Cat6a cables mitigate the errors significantly. All packet loss errors observed in extensive testing are considered recoverable by the host system with the JL563A/JL563B transceiver.

Central wavelength

Central wavelength (wl) represents the wave band used for optical signal transmission. The following central wavelengths are available for common optical transceiver modules representing three wavebands:

- 850 nm waveband: Used for short-reach transmission.
- 1310 nm and 1550 nm waveband: Used for middle-reach and long-haul transmission.

Fiber

Fiber types

Fibers are classified as multimode fibers and single-mode fibers.

Use patch cords with PC (Physical Contact Connector) or UPC (Ultra Physical Connector) types are supported. Patch cords with APC (Angled Physical Contact) connectors, usually colored green, are not supported.

Multimode fibers

Multimode fibers (MMFs) have thicker fiber cores and can transport light in multiple modes. However, the intermodal dispersion is greater and worsens as the transmission distance increases.

Multimode fibers can be classified into multiple grades according to their diameters and modal bandwidth. The modal bandwidth of a multimode fiber is determined by the expression of the maximum modulation frequency pulse that can pass a fiber $\times$ the fiber length. The modal bandwidth is a comprehensive index reflecting the optical characteristics of a multimode fiber.

International Telecommunication Union (ITU) defines multimode fiber types in its G series standards. The commonly used multimode fiber is defined in the ITU G.651 standard. The G.651-compliant fiber transmits light at the wavelength range 800 nm to 900 nm or 1200 nm to 1350 nm.

Table 2: Multimode fiber grades

Fiber mode	Fiber grade	Fiber diameter (μm)	Modal bandwidth at 850 nm (MHz*km)
Multimode fiber	OM1	62.5/125	200
	OM2	50/125	500
	OM3	50/125	2000
	OM4	50/125	4700

Other factors that influence the transmission distance of multimode fibers include interface type, central wavelength, and fiber grade. The modal bandwidth values shown above are for the fiber grades listed. There are multimode fibers that have different modal bandwidth characteristics and do not necessarily match the OM1 - OM4 grades. See the individual transceiver specifications for distances supported when using MMF OM1-OM4. OM5 is a grade of multimode fiber that is primarily designed for short wave division multiplexing (SWDM) used by 40G speeds and higher. There usually is no distance advantage for 10G thru 40G speeds that use single wavelengths over a fiber.

Single-mode fibers

Single-mode fibers (SMFs) have a small core size, typically 9 μm or 10 μm , and can transmit light in only one mode. Single-mode fibers suffer little intermodal dispersion and are suitable for long-haul communication. Single-mode fibers transmit light at the central wavelength of 1310 nm or 1550 nm.

Telecommunication Industries Alliance (TIA)/Electronic Industries Alliance (EIA) defines that single-mode fibers use yellow outer jackets with the mark "SM".

ITU defines single-mode fiber types in its G series standards. The most commonly used single-mode fibers are defined in ITU G.652 and G.655 standards. The following table describes features of the G.652 and G.655-compliant fibers.

Table 3: Features of G.652- and G.655-compliant fibers

Single-mode fiber type	Wavelength (nm)	Features	Applications
G.652-compliant fiber (standard single-mode fiber)	1260 to 1360 1530 to 1565	Zero dispersion at 1310 nm	Connecting transceiver modules with a central wavelength of 1310 nm or 1550 nm.
G.655-compliant fiber (non-zero dispersion shifted fiber)	1530 to 1565	Near-zero dispersion around 1550 nm	For 1550 nm wavelength-division multiplexing (WDM) transmissions.

Fiber diameter

Fiber diameter is expressed as core diameter/cladding diameter, in μm . For example, 9/125 μm means that the fiber core diameter is 9 μm and the fiber cladding diameter is 125 μm .

For the HPE devices, the following fiber diameters are recommended:

- **G.651 standard multimode fiber:** 50/125 μm or 62.5/125 μm
- **G.652 standard single-mode fiber:** 9/125 μm
- **G.655 non zero dispersion shifted single-mode fiber:** 9/125 μm

Connector

Cover the connector with a dust cap when it is not connected to any optical fibers.

Connectors connect transceiver modules to the corresponding transmission media. The transceiver modules available for Aruba products use the following types of connectors:

Lucent connector or local connector (LC)

Single LC connectors (also known as Simplex) are typically used for 1G & 10G BiDi (Bidirectional) optics.

Dual LC connectors (Duplex) are typically used in normal optical types.

Fiber connectors used for insertion into optical transceivers are typically of the ferrule polish type PC (Physical Contact) or UPC (Ultra Physical Contact). These minimize the air gap when inserted into a transceiver or when fiber to fiber mating.

Another type of polished end is the Angled Physical Contact usually with an 8° polished angle. Although this reduces reflected signal loss, the difficulty in mating the two angled surfaces limits it to only the most demanding splicing conditions.

Use PC or UPC type of fiber cables for use with transceivers.

40G BiDi uses only Duplex fiber versus MPO (see below) for 40G SR4 applications.

Figure 1 LC connector (Simplex = single fiber, Duplex = dual fiber)

Multifiber Push On (MPO) connector

Figure 2 MPO connector: Female (guide holes) and Male (guide pins)

The 40G SR4 and 100G SR4 MPO transceiver modules use only cables with female MPO connectors, which have guide holes in the end face of the MPO connector (the transceiver has guide pins within the MPO receptacle).

MPO connectors are available with 12 fibers or 24 fibers:

- 12-fiber MPO connector (40G, SR4, eSR4, and 100G SR4 transceivers use 8 of the available 12 fibers; the four center fibers are unused). 24 fiber MPO cables are used for other types of 100G transceivers (typically 10 channel where 20 fibers are required) (not covered in this guide).

Figure 3 End face of a 12-fiber connector and channel assignment

MPO transceivers typically use four channels to communicate. These channels are assigned using the outer eight fibers (the center four are unused).

Transmit channels are one set of four fibers, and the receive channels are on the other set of four fibers. Patch cables and structured cabling from endpoint to endpoint must create a proper crossover connection to link transmit to the other ends receive, with attention to each 40G or 100G channel selection.

The MPO cable types used by 40G SR4/eSR4 and 100G SR4 and used for 'patch' cable connections or direct transceiver to transceiver connection are typically referred to as female "Type B", key-up crossover cables. (Type B cables route fiber 1, 2, 3,...11,12 to fiber 12, 11, 10,...,2, 1 on the opposite end to effect a crossover and matching Transmit channels to Receive Channels.

Be aware that using two crossover cables in series cancels this effect and no connection will be established. An odd number of crossovers combined with straight-thru fiber connections will effect a crossover connection.

The channel layout indicates that the left four fibers are Transmit, and must reach the opposite transceiver Receive channels (and in proper channel order).

Do not use Type A (straight-thru) or Type C (paired crossovers) MPO cables.

Splitting of QSFP+ and QSFP28 ports

Quad-SFP (QSFP+ and QSFP28) ports allow for four channels of lower-bandwidth communication.

AOS-CX release 10.05 introduced this feature for select switches and modules. Split port is not available for AOS-S products.

- A QSFP+ 40G port can be split into four(4) 10G speed ports
- A QSFP28 100G port can be split into four(4) 25G speed ports

Most QSFP28 ports can be used with either 40G or 100G optics, DAC or AOC cables. Not all QSFP28 port can be split into channels of 10G or 25G: what's required are MACs and PHYs that can support both 10G and 25G speeds. Some designs will allow only splitting into the four (4) channels at 10G because they lack a 25G MAC (for example, the Aruba 8400 Switch Series JL366A 6port 40G/100G module). Some switches/modules also limit only certain ports to be split because of design combinations of PHY/Ports or limitations of the maximum number of MACs in a switching ASIC.

An example CLI configuration for port 1/1/52:

```
switch(config-if)# interface 1/1/52
switch(config-if)# split
This command will disable the specified port, clear its configuration,
and split it into multiple interfaces. The split interfaces will not
be available until the next system or line module reboot.

Continue (y/n)? y

switch(config-if)# show interface brief
```

Port	Native VLAN	Mode	Type	Enabled	Status	Reason	Speed (Mb/s)	Description
1/1/52:1	--	routed	QSFP+DA3x4	yes	up		10000	Aruba-AP
1/1/52:2	--	routed	QSFP+DA3x4	yes	up		10000	--
1/1/52:3	--	routed	QSFP+DA3x4	yes	down	Waiting for link	--	--
1/1/52:4	--	routed	QSFP+DA3x4	yes	down	Waiting for link	--	--

AOS-CX release 10.05 and 10.06 requires the config to be saved and the switch or module to be rebooted to take on the new configuration for the port. This requirement is removed in AOS-CX 10.07 and later releases.

DAC breakout cables

Figure 1 *DAC Breakout cables*

DAC Breakout cables typically have a QSFP-type connector on one end and four (4) SFP-type connectors at the other end.

DAC cables are passive devices and used for short (<5m lengths) distances. 40G breakout and 100G breakout DACs look the same, but they are different parts (different Part Type information encoded on both ends).

40G splits to 4x 10G identify as a 4 channel 10G cable on the QSFP+ side, and the SFP+ ends identify as a 10G DAC part.

100G splits to 4x 25G in a similar manner. Usually the QSFP28 port is configured as an either/or 100G or 40G so the individual 4 channels are limited to the same speed on the SFP ends (either 25G or 10G). The cable speed is not configurable and cannot be mixed. QSFP28 cables are always 100G and QSFP+ cables are always 40G. A QSFP28 cable, at the time of this publication, cannot be used as a 40G connection nor split into 4 x 10G links.

Breakout optical cables

Figure 1 *Breakout Optical Cables*

Parallel optical technologies such as 40G SR4/eSR4 and 100G SR4 optical transceivers can also split into four separate optical streams to connect to 10G SR or 25G SR/eSR optics on the opposite end of the link using fiber breakout cables.

LR4/ER4 technologies use a Singlemode Fiber (SMF) in each direction, and multiplex (combine) 4 different wavelengths over a single fiber in each direction (hence LR4/ER4 use a 2-fiber LC connector). The wavelengths are de-muxed on the receive side. Unlike SR4 technologies, where each channel can be split into separate channels, LR4/ER4 technologies cannot be split into separate 10G or 25G LR technologies. Aruba does not offer PLR4 (Parallel LR 4) technology.

The fiber breakout cable used is an MPO to 4x LC type of cable with Multimode Fiber (MMF) pairs in a specific configuration (see above MPO Fiber channel assignment).

The LC ends can be connected to your fiber patch panel to reach the end of the link to a 10G or 25G SR/eSR transceiver (depending on which speed is being split). Ensure you obtain a female (no pins) MPO 12-fiber connector mapped to only 4 LC connectors of Multimode Fiber of OM3 or better. Fiber breakout cables that have 6 LC connectors are usually mapped for a different type of application and cannot be used with 40G or 100G transceivers.

The distance this optically split link can support is determined by the 40G or 100G transceiver, not the 10G or 25G transceiver on the other end of the link. For example, a 100G SR4 can reach 70m over OM3 or 100m over OM4 -- this is the same distance as a 25G SR on the other end of the links. Using a 25G eSR4 (JL485A) transceiver with a longer reach of 200m over OM3 or 400m over OM4 will not accomplish the longer reach, but it is indeed optically compatible and can link to the 100G SR4 limits of 70m/100m.

The following optical breakout cables can be used with 40G SR4/eSR4 to split into 4x10G SR, or with 100G SR4 to split into 4x25G SR compatible streams.

These cables are ordered from the HPE Compute and Server or Storage business units and may not be available to Aruba-only resellers.

Fiber breakout cables (from HPE Server products)

- (Server SKU) R1N86A, HPE 12 Fiber MPO to 4xLC MM 3m Cbl
- (Storage SKU) K2Q46A, HPE MPO to 4 x LC 5m Cable
- (Storage SKU) K2Q47A, HPE MPO to 4 x LC 15m Cable

It is important that the LC connectors map to the 4 channels in this manner:

MPO connector Fiber numbers	LC connector	Logical interface (using port 52 as an example)
1 and 12	LC #1	1/1/52:1
2 and 11	LC #2	1/1/52:2
3 and 10	LC #3	1/1/52:3
4 and 9	LC #4	1/1/52:4
5 thru 8 are unused		

Starting with AOS-CX 10.05, the following switches and modules are capable of splitting a QSFP+ or QSFP28 port with the noted restrictions. Configure the ports for split mode. 10.05 and 10.06 require the configuration to be saved and the switch to be rebooted to enable the split operation on the ports.

Starting with the 10.07 release, the need to save and reboot is now removed for the 8320, 8325, and 8360 series; the 8400 still requires a save and reboot (no support for split ports on the 6400 series).

The 8400 still requires a save and reboot with AOS-CX 10.07.

Part Number (PN)	Description	Port info

Aruba 6400 modules with QSFP28 ports do not have Split Mode enabled in AOS-CX as of 10.10 or earlier releases. AOS-Switch products do not allow splitting of QSFP+ ports (5400R, 3810M, 2930M).

Optical parameters

This guide provides average transmit and receive power ranges for transceiver modules.

Transmit power

Transmit power is the power at which the transmitter of an optical transceiver module transmits optical signals, in dBm.

Receive sensitivity

Receive power is the power at which the receiver of an optical transceiver module receives optical signals, in dBm.

Using attenuators (for short test cables)

Transceivers are designed to transmit light pulses at power levels that account for loss in the fiber optic cabling, and meets the receiver input thresholds of the link partner optical transceiver.

If you are using a fiber cable with less light loss than expected (for example, in a test environment and you do not have a 40km spool of SMF available), use attenuators to reduce the transmit level to be within the receive sensitivity of the other transceiver -- you will need to condition both fibers (sends in both directions). If not done, you risk overdriving the Receive end and permanently damaging the transceiver. For example, a 40G ER4 has a highest transmit level of 4.5dBm, but the Receive Sensitivity can be no higher than -4.5dBm. That means there must be at least a 9dBm loss on the light level to be within the standards ($4.5 - (-4.5) = 9\text{dBm}$ required). Attenuation required = (highest transmit power) - (highest receive sensitivity).

Copper transceiver modules

Copper transceiver modules transmit signals over Category-5, -5e, -6, and -6a unshielded twisted pair (UTP) or shielded twisted pair (STP). UTP transmission cover shorter distances than fiber transmission and can be used in small-sized networks only. 10G over twisted pair requires the use of Category 6 and 6a.

Copper transceivers are supported in 1G SFP and 10G SFP+ ports where listed in the compatibility tables.

Transmission distance

Through UTP or STP cables, signals can be transmitted over a distance of 100 m (328.08 ft.) only. This behavior occurs because signals attenuate during transmission through the UTP cables.

Attenuation refers to the dissipation of the power of a transmitted signal as it travels over a cable.

Attenuation occurs because signal transmission suffers certain resistance from the cable, which weakens the signals as they travel over the cable. When signals are transmitted over a long distance, signal strength decreases significantly, causing the signal-to-noise ratio to drop below the accepted level. This decrease makes it impossible to distinguish between signals and noise, which results in data loss.

Patch panel and punch down blocks also affect attenuation; that is, they can be a source of issues resulting in shorter distances or data loss.

10GBASE-T connections require Category 6a as a minimum for proper 10G speeds up to the 100m distance dictated by the IEEE 802.3ae standard for a fixed 10GBASE-T port. The JL563A/JL563B transceiver has a limit of 30m max distance due to limited power available to the transceiver (vs a fixed 10GBASE-T port). Anything less (Cat 6, 5e, 5) will compromise the distance that 10G over copper can achieve.

Shielded Twisted Pair (STP) Cat 6a cable is recommended when using the 10GBase-T transceiver (JL563A/JL563B).

Use of STP prevents EMI events from affecting data traffic carried on the wire - known as Crosstalk or Alien Crosstalk. Large EMI events from electronically noisy environments may be coupled onto unshielded cabling and cause temporary packet errors. Fixed 10G ports have designs to counteract these types of bit error conditions, that the 10GBASE-T transceiver cannot counteract consistently. Using STP Cat6a cables mitigate the errors significantly. All packet loss errors observed in extensive testing are considered recoverable by the host system with the JL563A/JL563B transceiver.

Connector

Registered Jack-45 (RJ-45) twisted-pair connectors are used as connectors for copper transceiver modules.

Figure 1 RJ-45 connector

Table 4: RJ-45 GE connector pin assignment for Gigabit connections

Pin	Signal	Function
1	MX_0+	Data transmit/receive
2	MX_0-	Data transmit/receive
3	MX_1+	Data transmit/receive
4	MX_2+	Data transmit/receive
5	MX_2-	Data transmit/receive
6	MX_1-	Data transmit/receive
7	MX_3+	Data transmit/receive
8	MX_3-	Data transmit/receive

Identification of 4x4 part numbers

A SKU# (Stock Keeping Unit, also called a Product Number or Part Number) may be fulfilled by one or more vendor parts providing similar functionality. A 4x4 (or "4 by 4") part number is of the form *nnnn-nnnn* and is printed on the transceiver, DAC, or AOC label. For example, J9151E (10G LR) may have 1990-4727 or 1990-4694 as the associated 4x4 part number.

4x4 part numbers are referenced in the:

- specification tables, to identify parts that support DOM (Digital Optical Monitoring) capabilities. (Some older vendor parts do not support DOM.)
- compatibility tables, where necessary, to identify supported combinations of switch or module with the identified transceiver, along with the minimum software version required.

In December 2017, Aruba introduced Revision D (and, in 2019, a Rev E 10G LR optic) versions of 100M, 1G, and 10G products. Revision D transceivers and DACs eliminated previous alternative vendors, so that you can be assured that only certified vendor parts are supported on AOS-CX Series Switch products. Earlier Revision A, B, or C product may have alternative vendors that Aruba no longer actively ships, but remain fully supported in specific switches. The specifications for Revision D transceiver products are the same as the specified Revision A, B, and C SKUs. Where support for a Revision A, B, or C transceiver existed on an earlier switch product, Revision D parts are also supported.

Some switch products will specify Revision D (and, in some cases, Rev E 10G LR optic) transceivers for full support, while other products may support earlier (older) revision transceivers – and some with specific 4x4 part numbers.

To cross-reference the Transceiver/DAC product against the switch product to identify the minimum software required for transceiver support, always refer to the Datasheet or QuickSpecs for the switch product to see the current list of supported transceivers. Refer to the compatibility tables within this document .

To use CLI commands to display data for an installed transceiver, see the following examples.

```

Unsupported transceiver mode

The term "transceiver" applies collectively to optical transceivers, DAC and AOC cables, and Port Adapters. The "allow-unsupported-transceiver" ("UT-mode") feature provides the flexibility to use non-Aruba/HPE transceiver products. Allowing use of unsupported products in Aruba switches can assist in the initial installation or validation of switching products while you obtain fully supported products.

The term "third-party transceiver" applies to transceiver parts not specifically identified on datasheets or in this guide. Transceivers sold by Aruba for use on other switches/controllers not listed within this guide or sold by HPE for use on HPE Servers or Storage devices are also considered "third-party". This guide indicates the specific transceiver products and minimum software version required for full support. Older generation transceivers may not be fully supported on newer generations of switch models. For questions, contact your Aruba Account Team who can get clarity from Aruba Product Line management.

Using third-party products present these caveats:

- An unsupported transceiver is used by the customer at their own risk. Acceptance of this liability must be confirmed when enabling UT-mode

- Aruba assumes no liability to ensure the proper operation of a product not designed/designated as supported, even from future revisions of AOS-CX firmware. No guarantees are implied that a third-party transceiver will continue to work from release to release.
- Third-party transceiver products are not under the control of Aruba, so Aruba has no knowledge of changes in design and cannot vouch for the quality of the third-party part, nor any assurance that the parts are the same from time to time.

UT-mode is implemented in the following switch series:

- AOS-S 16.02: 5400R, 3810M, 2930M/2930F, 2930, 2920 2540, and 2530 (1G-40G)
There may be other products that can also run 16.02 switch code, but UT-mode is not extended to those switch series.
- AOS-CX 10.05.0001: all AOS-CX Switch series (1G-10G only)
- AOS-CX 10.09.0002: 8360, 8325 and 10000 (1G to 100G) enabled by default
- AOS-CX 10.10.0002: all AOS-CX Switch series (all speeds) enabled by default

100Mbps may still be limited on some models to only support Aruba 100FX transceivers)

There is no guarantee that an unsupported transceiver WILL be enabled; however, it can be attempted.

The UT-mode command (particularly on an AOS-Switch) may require an acknowledgment of the support risk before use. An example CLI session may look like this:

```
switch(config)# allow-unsupported-transceiver
Warning: The use of unsupported transceivers, DACs, and AOCs is at your own risk and
may void support and warranty. Please see HPE Warranty terms and conditions.

Do you agree and do you want to continue (y/n)?
```

Supported vs unsupported

Simply because a part is enabled for use, does not mean that it is "supported".

- Supported products are listed and covered by the terms found on the [Product Warranty and Support](#) page.
- Supported products warranty can be extended (beyond the typical 3 year warranty) with a Support Contract on the covered switch (the inserted transceivers are covered by the switch contract).
- When it is determined that an issue may involve questionable connectivity using an unsupported transceiver (optics/DACs/AOCs), the Technical Assistance Center (TAC) may ask that you replace the third-party transceiver with a product supported for use with Aruba switches before continuing troubleshooting activities. The support call will be paused until this is done, eliminating the suspicion of the third-party transceiver as a possible issue.
- Even if a product displays a part number as one of the "supported" product part numbers, if the TAC discovers that the part is not a bonafide Aruba or HPE part (that is, a counterfeit or a compatible product), they may elect to halt the support call. Damage to the switch or port would not be covered under warranty.
- The CLI command `show interface transceiver detail` may display unreliable information (for example, DOM). The accuracy of the electronic information in third-party products is unknown to and

not verified by Aruba. The information is reported on a best-effort basis. AOS-CX software may or may not use any information provided by a third-party/unsupported transceiver.

This guide details products that are supported by a switch model or module. In some cases, a particular switch model or module may not have the proper hardware or software support to allow a transceiver technology to work at all. This guide denotes that limitation with a comment about "or any type of technology" - even with UT-mode that type of transceiver most likely will not work. For example: J9152A/J9152D (or any type of 10G LRM technology) is not supported in any 2930F model.

Transceiver products (including DACs and AOCs) have identification information within the product - this information is read when the transceiver is inserted into the switch. Aruba switches use this information to validate whether the part is a "supported" product. If not, it is officially "unsupported" and usually shown as such.

Some considerations for third-party products:

- Do they follow the guidelines agreed upon by Multi-Source Agreement (MSA) vendors? MSA specifications dictate many physical characteristics, but not necessarily the electrical designs. For that reason, a transceiver may work in one switch/module, but not in another due to design differences not taken into consideration for fully supported products.
- Many low-cost products do not properly code the MSA required fields for type, distance, media type among other fields, or they may incorrectly identify the part, causing the switch to enable them with settings not appropriate for the type of transceiver inserted.
- Does the part work the way the Aruba switches expect them to? Aruba 'tunes' ports according to the characteristics of selected parts.
- Third-party products may substitute a different vendor part from time to time. The third-party product you buy today may work, but the part you buy a month from now could be a different part. There are no guarantees.

Hewlett Packard Enterprise Company consists of different divisions and product families (often times by recent acquisitions). The Aruba division is one of these many divisions. Transceiver products that are designed to work with specific HPE division products, may not work properly on Aruba switches. For this reason, until the Aruba division has done the development work to certify other HPE division products work on Aruba switches, those products may be identified as third-party, and their complete operation and full support is not absolutely certain.

100G QSFP28 optical transceiver modules that use MPO connectors

QSFP28 modules are designed to operate with 4 channels of 28G (the "Q" stands for Quad) resulting in a combined bandwidth of 100G links. QSFP28 ports are also compatible to support QSFP+ which are 4 channels of 10G bandwidth resulting in 40G links. QSFP28 transceivers, DACs, and AOCs can be broken into 4 separate links of 25G or 10G but are determined by the switch hardware behind the QSFP28 port (See [Splitting of QSFP+ and QSFP28 ports](#) for more information). QSFP28 ports support products that are typically NRZ (Non-Return to Zero) technology, resulting in up to 4x 28G streams of data. See [Overview](#) for information regarding MPO connectors and cable requirements.

Figure 1 QSFP28 optical transceiver module that use MPO connectors

Models, specifications, and compatibility

QSFP28 optical transceiver modules provide a transmission rate of 100 Gbps.

Table 5: Specifications for QSFP28 optical transceiver modules that use MPO connectors

Product name (SKU)	DOM - Digital Optical Monitoring (4x4 part #)	Central wl (nm)	Fiber mode	Fiber diameter (μm)	Modal bandwidth (MHz*km)	Transmission distance
Aruba 100G QSFP28 MPO SR4 100m 12-fiber MPO MMF Transceiver (JL309A)	YES (1990-4680, 1990-4678)	850	MMF	50/125	2000 (OM3) 4700 (OM4)	70 m (229.66 ft) 100 m (328.08 ft)

SR4 is not supported for use over MMF OM1 or OM2 fiber. (The IEEE standard does not state a specification.) Use MPO Female connectors (no pins) with MPO transceivers. See [Multifiber Push On \(MPO\) connector](#) for more information about MPO connectors.

100G SR4 optics can be used by a QSFP28 port that can be "split" into four channels of 25G (available on select switch models/modules on identified ports). See [Splitting of QSFP+ and QSFP28 ports](#) for more information.

The following optical breakout cables can be used with 100G SR4 to split into 4x 25G SR compatible streams. These cables are ordered from the HPE Compute and Server or Storage business units and may not be available to Aruba-only resellers.

Fiber breakout cables (from HPE Server products):

- (Server SKU) R1N86A, HPE 12 Fiber MPO to 4xLC MM 3m Cbl
- (Storage SKU) K2Q46A, HPE MPO to 4 x LC 5m Cable
- (Storage SKU) K2Q47A, HPE MPO to 4 x LC 15m Cable

See [Splitting of QSFP+ and QSFP28 ports](#).

Table 6: Specifications for QSFP28 optical transceiver modules that use MPO connectors

Product name (SKU)	Connector	Optical parameters (dBm)	
		Transmit power	Receive power

**The 48 and 32 x 25G port models of the 8360 switch also support low-density MACsec ports and enable secured connectivity at 10GbE and 25GbE over unsecured domains. The 48 x 25G port model of the 8360 switch also supports MACsec with 2 x40/100G ports.

100G QSFP28 optical transceiver modules that use LC connectors

Figure 1 QSFP28 optical transceiver module that use LC connectors

Models, specifications, and compatibility

QSFP28 optical transceiver modules provide a transmission rate of 100 Gbps and use LC connectors.

The 845972-B21 100G BiD transceiver is a Short Reach 100G product, designed to work over Multi-mode Fiber (MMF) only of OM3 or better quality. It is NOT supported for use over OM1/OM2 quality fiber.

The 845972-B21 100G BiDi transceiver is offered by HPE Compute and ordered using the specified part number (transceiver may not be available to order for Aruba-only partners).

Refer to the [HPE Compute transceiver and cable hardware matrix product availability matrix](#) at hpe.com to verify compatibility with HPE network adapters.

Table 8: Specifications for QSFP28 optical transceiver modules that use LC connectors

Product name (SKU)	DOM - Digital Optical Monitoring (4x4 part #)	Central wl (nm)	Fiber mode	Fiber diameter (µm)	Transmission distance

100G QSFP28 DAC and breakout DAC (copper cables)

Figure 1 QSFP28 DAC and breakout DAC (copper cable)

Models, specifications, and compatibility

Table 11: Specifications for QSFP28 copper cables

Product name (SKU)	Cable length	Data rate	Description
Aruba 100G QSFP28 to QSFP28 1m Direct Attach Copper Cable (R0Z25A)	1 m (3.28 ft)	100 Gbps	Used for interconnecting 100-Gigabit QSFP28 ports
Aruba 100G QSFP28 to QSFP28 3m Direct Attach Copper Cable (JL307A)	3 m (9.8 ft)	100 Gbps	Used for interconnecting 100-Gigabit QSFP28 ports
Aruba 100G QSFP28 to QSFP28 5m Direct Attach Copper Cable (R0Z26A)	5 m (16.4 ft)	100 Gbps	Used for interconnecting 100-Gigabit QSFP28 ports

The following breakout DAC cable is offered by HPE Servers and Systems and ordered using the specified part number (these cables may not be available to order for Aruba-only partners). Refer to the [HPE Compute transceiver and cable hardware matrix product availability matrix](#) at hpe.com.

AOS-CX releases 10.05 and later support a `split` command configured on 100G QSFP28 ports.

See [Splitting of QSFP+ and QSFP28 ports](#) for more information.

For the AOS-CX 10.05 and later releases, the configuration requires a save and reboot of the switch or module. See the *Monitoring Guide* for details on the `split` command.

QSFP28 to SFP28 adapter support

Figure 1 QSFP28 to SFP28 adapter

Models, specifications, and compatibility

The following QSA28 to SFP28 adapter is offered by HPE Servers and Systems and ordered using the specified part number (this product may not be available to order by Aruba-only partners).

HPE QSFP28 to SFP28 Adapter (845970-B21)	When used in a QSFP28 port allows for use of 25G or 10G optics When used in a QSFP+ port only use of 10G optics
--	--

The 845970-B21 is not the same as the 655874-B21 or 720193-B21 which are 40G-only adapters (cannot work in QSFP28 ports). DACs and 10GBASE-T transceivers are NOT supported through the QSA28 adapter; 3rd party transceivers - may work, but remain listed as unsupported.

40G QSFP+ optical transceiver modules that use MPO connectors

Figure 1 QSFP+ optical transceiver module that uses MPO connectors

Models, specifications, and compatibility

QSFP+ optical transceiver modules provide a transmission rate of 40 Gbps and use Multifiber Push On (MPO) connectors.

40G SR4 and eSR4 are not supported for use over MMF OM1 or OM2 quality fiber. (The IEEE standard does not state a specification). Use MPO female connectors for use with the MPO transceivers. See [Overview](#) for information regarding MPO connectors and cable requirements.

Table 17: Specifications for QSFP+ optical transceiver modules that use MPO connectors (1)

Product name (SKU)	DOM - Digital Optical Monitoring (4x4 part #)	Central wl (nm)	Fiber mode	Fiber diameter (μm)	Modal bandwidth (MHz*km)	Transmission distance
HPE X142 40G QSFP+ MPO SR4 Transceiver (JH231A)	YES (1990-4554 1990-4557 1990-4737)	850	MMF	50/125	2000 (OM3) 4700 (OM4)	150 m (492.12 ft)
HPE X142 40G QSFP+ MPO eSR4 300M XCVR (JH233A)	YES (1990-4555)	850	MMF	50/125	2000 (OM3) 4700 (OM4)	400 m (1312.34 ft)

40G SR4/eSR4 optics can be used by a QSFP28/QSFP+ port that can be "split" into four channels of 10G (available on select switch models/modules on identified ports).

40G SR4/eSR4 are not supported for use over MMF OM1/OM2 quality fiber.

The IEEE standard did not specify any requirements for use over these types.

The following optical breakout cables can be used with 40G SR4/eSR4 to split into 4x 10G SR compatible streams. These cables are ordered from the HPE Compute and Server or Storage business units and may not be available to Aruba-only resellers.

Fiber breakout cables (from HPE Server products):

- (Server SKU) R1N86A, HPE 12 Fiber MPO to 4xLC MM 3m Cbl
- (Storage SKU) K2Q46A, HPE MPO to 4 x LC 5m Cable
- (Storage SKU) K2Q47A, HPE MPO to 4 x LC 15m Cable

AOS-CX release 10.05 and later supports a `split` command configured on 100G QSFP28 or 40G QSFP+ ports. See [Splitting of QSFP+ and QSFP28 ports](#).

Table 18: Specifications for QSFP+ optical transceiver modules that use MPO connectors (2)

Product name (SKU)	Connector	Optical parameters (dBm)	
		Transmit power	Receive power
HPE X142 40G QSFP+ MPO SR4 Transceiver (JH231A)	MPO (PC polished, 12-fiber)	-7.6 to 0	-9.5 to +2.4
HPE X142 40G QSFP+ MPO eSR4 300M XCVR (JH233A)	MPO (PC polished, 12-fiber)	-7.6 to 0	-9.9 to +2.4

Table 19: Compatibility for the QSFP+ optical transceiver modules that use MPO connectors (see [Unsupported transceiver mode](#))

40G QSFP+ DAC and breakout DAC (copper cables)

Figure 1 QSFP+ DAC and breakout DAC copper cables

Direct Attach over Copper (DAC) cables have a minimum bend radius of typically 10x the diameter of the cable (approximately 2.75" [70mm] bend radius). Handle DAC cables carefully to ensure that you do not crimp or bend the cable; otherwise, you risk damaging the cable.

Models, specifications, and compatibility

Table 23: Specifications for QSFP+ copper cables

Product name (SKU)	Cable length	Data rate
HPE X242 40G QSFP+ to QSFP+ 1m DAC Cable (JH234A)	1 m (3.28 ft)	40 Gbps
HPE X242 40G QSFP+ to QSFP+ 3m DAC Cable (JH235A)	3 m (9.84 ft)	
HPE X242 40G QSFP+ to QSFP+ 5m DAC Cable (JH236A)	5 m (16.40 ft)	

The following DAC breakout cable is offered by HPE Servers and Systems and ordered using the specified part number (these cables may not be available to order for Aruba-only partners). Refer to the [HPE Compute transceiver and cable hardware matrix product availability matrix](#) at hpe.com.

AOS-CX releases 10.05 and later support a `split` command configured on 100G QSFP28 ports.

As of the AOS-CX 10.05 and 10.06 releases, the configuration requires a save and reboot of the switch or module. See the *Monitoring Guide* for details on the `split` command.

See [Splitting of QSFP+ and QSFP28 ports](#) for more information.

Table 24: Specifications for HPE QSFP+ breakout DAC cables (from HPE Server products)

Product name (SKU)	Cable length	Data rate
HPE BLc 40G QSFP+ 4x10G SFP+ 3m DAC Cbl (721064-B21)	3m (9.84ft)	40G to 4 x 10G

40G QSFP+ to SFP+ Adapter

See [QSFP28 to SFP28 adapter support](#) for 40G support within QSFP28 or QSFP+ ports.

SFP56 optical transceiver modules

Always refer to the Datasheet or QuickSpecs for the switch product to see the current list of supported transceivers.

50G technology, implemented through an SFP56 port, is available on select models within the CX product family. Although 50G SFP transceivers (and 50G DACs) are the same physical size as a 1G, 10G, or 25G technology, the 50G products only work at the 50G speed and only in ports that are 50G-capable; usually marked as SFP56.

Figure 1 SFP56 optical transceiver modules

Models, specifications, and compatibility

SFP56 optical transceiver modules are a single-lane, serial 4-level Pulse Amplitude Modulation (PAM4) technology providing a transmission rate of 50 Gbps and use LC connectors. Note that 50G SFP56 technology can not be split into two 25G flows - it is a single-lane, single-wavelength technology.

Table 1: Specifications for SFP56 optical transceiver module

Product name (SKU)	DOM- Digital Optical Monitoring	Central wl (nm)	Fiber mode	Fiber Diameter	Modal bandwidth (MHz*km)	Transmission distance
Aruba 50G SFP56 LC SR 100m MMF XCVR (R0M48A)	Yes	850	MMF	50/125	OM3	70m (229.66 ft)
					OM4 and OM5	100m (328.08 ft)

50G SR transceivers are not supported for use over MMF OM1/OM2 quality fiber. The IEEE standard did not specify any requirements for use over these types of multimode fiber.

Table 2: Specifications for SFP56 optical transceiver modules

Product name (SKU)	Optical parameters (dBm)	
	Transmit power	Receive power
Aruba 50G SFP56 LC SR 100m MMF XCVR (R0M48A)	-6 to +4	-8.4 to +4

Table 29: Compatibility for the SFP56 transceiver module

Product name	SKU	Minimum Software required	Comments
Aruba 6300 series	All Models M and F JL762A(F-B airflow model)	10.09.1010

When selected, the upper two ports in a group are disabled and both bottom ports only support the 50G speed. Ports 1-4 on the 8360 48Y6C model do not support 50G speeds due to the MACsec capability limiting these ports to a maximum speed of 25G. See the Installation Guide for details.

SFP56 Direct Attach over Copper (DAC) cables

Always refer to the Datasheet or QuickSpecs for the switch product to see the current list of supported transceivers.

Figure 2 SFP56 DAC cable

Direct Attach over Copper (DAC) cables have a minimum bend radius of typically 4x the diameter of the cable (approximately a 1" bend radius). Handle DAC cables carefully to ensure that you do not crimp or bend the cable beyond a 1" radius; otherwise, you risk damaging the cable.

Models, specifications, and compatibility

Table 30: Specifications for SFP56 copper cables

Product name (SKU)	Cable length	Data rate
Aruba 50G SFP56 to SFP56 0.65m DAC Cable (R0M46A)	0.65m (2.13 ft)	50Gbps
Aruba 50G SFP56 to SFP56 3m DAC Cable (R0M47A)	3m (9.84 ft)	

Table 31: Compatibility for the SFP56 DAC copper cables

Product name	SKU	Minimum software required	Comments
Aruba 6300 Switch Series	All models M and F	R0M46A, R0M47A: 10.04.0001	Used for stacking or switch-to-switch interconnectivity (non-stack) Only in SFP56 ports

SFP28 optical transceiver modules

SFP28 ports are 25G speed ports and similar in size to a 10G SFP+ or 1G SFP port. They have supporting circuitry to enable 25G speed transceiver, DAC, and AOC components.

Although 10G and 1G transceiver products may 'fit' into an SFP28 port, the particular switch model or module may be limited in supporting lower speeds.

See [Types of transceiver modules and network cables](#) for information regarding the type of connectors used by SFP28 port products.

25G as a standard does not specify any distance over MMF OM1 or OM2 fiber. There is no guarantee for distance. Always refer to the Datasheet or QuickSpecs for the switch product to see the current list of supported transceivers.

Figure 1 SFP28 optical transceiver modules

Models, specifications, and compatibility

SFP28 optical transceiver modules provide a transmission rate of 25 Gbps and use LC connectors.

Table 32: Specifications for SFP28 optical transceiver modules (1)

Product name (SKU)	DOM- Digital Optical Monitoring (4x4 part number)	Central wl (nm)	Fiber mode	Fiber Diameter	Modal bandwidth (MHz*km)	Transmission distance
Aruba 25G SFP28 LC SR 100m MMF XCVR (JL484A)	Yes (partial)	850	MMF	50/125	2000 (OM3)	70m (229.66 ft)
					4700 (OM4)	100m (328.08 ft)
Aruba 25G SFP28 LC eSR 400m MMF XCVR (JL485A)	Yes (partial)	850	MMF	50/125	2000 (OM3)	200m (656.16 ft)
					4700 (OM4)	400m (1,312.34 ft)
Aruba 25G SFP28 LC LR 10km SMF Transceiver (JL486A)	Yes (partial)	1310	SMF	9/125	n/a	10km (6.21 miles)

25G SR/eSR are not supported for use over MMF OM1/OM2 quality fiber.

The IEEE standard did not specify any requirements for use over these types of multimode fiber.

Table 33: Specifications for SFP28 optical transceiver modules (2)

25G SFP28 Direct Attach over Copper (DAC) cables

Always refer to the Datasheet or QuickSpecs for the Switch product to see the current list of supported transceivers.

Figure 1 SFP28 DAC copper cable

Direct Attach over Copper (DAC) cables have a minimum bend radius of typically 4x the diameter of the cable (approximately a 1" bend radius). Handle DAC cables carefully to ensure that you do not crimp or bend the cable beyond a 1" radius; otherwise, you risk damaging the cable.

Models, specifications, and compatibility

Table 35: Specifications for SFP28 DACs

Product name (SKU)	Cable length	Data rate
Aruba 25G SFP28 to SFP28 0.65m DAC Cable (JL487A)	0.65m (2.13 ft)	25 Gbps
Aruba 25G SFP28 to SFP28 3m DAC Cable (JL488A)	3m (9.8ft)	
Aruba 25G SFP28 to SFP28 5m DAC Cable (JL489A)	5m (16.40 ft)	

The following DAC cables are offered by HPE Servers and Systems and ordered using the specified part number (these cables may not be available to order for Aruba-only partners). Refer to the [HPE Compute transceiver and cable hardware matrix product availability matrix](#) at hpe.com.

Table 36: Specifications for HPE SFP28 DACs (from HPE Server Products)

SFP+ optical transceiver modules

In December 2017, Aruba introduced Revision D versions of 100M, 1G, and 10G transceivers. Revision D products are structured to be specific alternate vendors as sources for the SKU#. Earlier Revision A, B, or C product may have alternate vendors that we no longer actively ship, but remain as fully supported in earlier and current products.

Some switch products will be specifying Revision D or Revision E (as is the case for the 8325 requiring J9151E or later) transceivers for full support, while other products may support earlier (older) revision transceivers – and some with specific 4x4 part numbers (see [Identification of 4x4 part numbers](#) for information).

Always refer to the Datasheet or QuickSpecs for the switch product to see the current list of supported transceivers.

Figure 1 SFP+ optical transceiver modules

-
- Although a 10G SFP+ transceiver module is the same physical dimensions of a 1G SFP transceiver, a 10G transceiver will NOT operate in a 1G-only SFP port.
 - Many, although not all, 10G SFP+ ports have support to use a 1G SFP transceiver (or even a 100Mbps FX SFP transceiver).
- See the QuickSpec for the Switch product and verify if the 1G or 100Mbps SFP transceiver is supported in the 10G SFP+ port.
-

Models, specifications, and compatibility

SFP+ optical transceiver modules provide a transmission rate of 10.31 Gbps and use LC connectors.

The specifications for Revision D and E transceiver products are the same as the specified Revision A, B, C SKUs. Where support for a Revision A, B, or C transceiver existed, Revision D or E parts are also supported. Not all earlier revisions can be re-used on newer products: Check the tables below and compare the 4x4 number of the part to the list of supported 4x4 numbers. See [Identification of 4x4 part numbers](#) for more information.

Table 41: Specifications for SFP+ optical transceiver modules (1)

XCVR (J9153D)						link). 30km on standard SMF links.

J9152D 10G LRM (Long Reach Multimode) with 4x4 numbers 1990-4485 or 1990-4801 are tuned so that they do not require a Mode Conditioning Patch (MCP) cable. Older J9152A with 4x4 numbers other than 1990-4485 or 1990-4801 may require an MCP when you use OM1 or OM2 fiber cables. Never use mode conditioning patch cables for OM3 or OM4 fiber types. For more information about mode conditioning patch cables, see related sections in the IEEE 802.3 standard.

10G LRM transceivers require an Electronic Dispersion Compensation (EDC) behind the SFP+ port to support 10G LRM technology. Switches with note "(or any type of 10G LRM technology)" cannot support any type of 10G LRM transceiver (even under Unsupported Transceiver mode).

Aruba 10000 48Y6C models	R8S96A displayed by CLI (show system) ■ R8P13A - 48Y6C FB bundle ■ R8P14A - 48Y6C BF bundle	All 10000 models: J9150D: 10.10.0002 JL748A(TAA), J9151E, JL748A(TAA): 10.10.0002 J9152A/J9152D (or any type of 10G LRM technology) is not supported in this series	J9153D:10.10.0002	Only the listed 4x4 parts are fully supported J9150A/J9150D ■ 1990-4391 ■ 1990-4175 ■ 1990-4635 ■ 1990-4634 J9151D is not supported: J9151E: ■ 1990-4727 ■ 1990-4694

J9152D 10G LRM with part numbers 1990-4485 and 1990-4801 are tuned so that it does not require the use of a mode conditioning patch (MCP) cable. Using an MCP with a J9152D will reduce the light levels and may trigger an "Rx power low" alarm. Older J9152A with part numbers other than 1990-4485 or 1990-4801 may require an MCP when you use OM1 or OM2 fiber cables. Never use mode-conditioning patch cables for OM3 or OM4 fiber types. For more information about mode conditioning patch cables, see related parts in the IEEE 802.3 standard.

Aruba 6200 Switch Series	All models	10.04.1000	JL563A/JL563B does not support flow control and only operates at 10G speed (does not auto-negotiate to 1G)
Aruba 6300 Switch Series	All models M and F	10.04.0001	JL563A/JL563B can be used in all SFP+ or SFP56 ports; no quantity limit. JL563A/JL563B does not support flow control and only operates at 10G speed (does not auto-negotiate to 1G).
	R8S89A, R8S90A, R8S91A, R8S92A	10.10.0002	
Aruba 6400 Modules	R0X39C, R0X40C, R0X41C, R0X42C, R0X43C	10.04.1000	R0X39A/R0X40A (revision A) are no longer supported for use in the 6400 series JL563A/JL563B can be used in all SFP+ , SFP28, or SFP56 ports; no quantity limit. JL563A/JL563B does not support flow control and only operates at 10G speed (does not auto-negotiate to 1G). R0X44A/R0X44C auto-detects the inserted type of transceiver; it does NOT require any "interface groups" like the 8325.
	R0X44A	10.04.2000	
Aruba 8320 48p 10G SFP/SFP+ and 6p	JL479A	10.01.0011	JL563A/JL563B does not support flow control and only operates at 10G speed (does not auto-negotiate to 1G). It is only supported in ports 1

Product name	SKU	Minimum software required (JL563A/JL563B)	Comments
40G QSFP+ Switch			– 12. Use in any other port generates an incompatible interface error (meaning the port does not support the use of this transceiver); move to a supported port. A maximum of 12 JL563A/JL563B transceivers can be used in a switch.
Aruba 8325 48Y8C	JL635A displayed by CLI (<code>show system</code>) ■ JL624A - Port-to-Power model (FB) ■ JL625A - Power-to-Port model (BF)	10.03.0030	JL563A/JL563B does not support flow control and only operates at 10G speed (does not auto-negotiate to 1G). A maximum of 12 JL563A/JL563B transceivers can be used in a switch. It is only supported in the top two rows, ports 1 - 17. It is disallowed in ports 3, 6, 9, 12, and 15. Use in any other port generates an incompatible interface error (meaning the port does not support the use of this transceiver); move to a supported port. The 8325 requires configuration of "interface groups(groups of 12 ports) to enable the use of 1G or 10G transceivers / DACs in the SFP28 ports (Interface Groups default to 25G speed). See the <i>Installation Guide</i> for details.
Aruba 8360 Switch Series	8360 32Y4C models JL717A/JL717C(v2) displayed by CLI (<code>show system</code>) ■ JL700A/JL700C(v2) Port-to-Power model ■ JL701A/JL701C(v2) Power-to-Port model 8360 16Y2C models JL718A/JL718C(v2) displayed by CLI (<code>show system</code>) ■ JL702A/JL702C(v2) Port-to-Power model ■ JL703A/JL703C(v2) 3A Power-to-Port model 8360 24XF2C models JL722A/JL722C(v2) displayed by CLI (<code>show system</code>) ■ JL710A/JL710C(v2) Port-to-Power model	JL7117A/JL717C(v2), JL718A/JL718C(v2), JL722A/JL72C(v2): 10.06.0001 JL719C: 10.09.0002	JL563A/JL563B does not support flow control and only operates at 10G speed (does not auto-negotiate to 1G). JL563A/JL563B transceivers can be used in all SFP or SFP28 ports in the 8360 switch (unlike the 8320 & 8325). The 8360 32Y4C and 48Y6C models require configuration of "interface groups" only for ports 1-4 (as group #1) to enable the use of 10G transceivers / DACs in the SFP28 ports (Interface Groups default to 25G speed). Ports 1-4 on the 8360 32Y4C and 48Y6C models do not support 1G transceivers. All other ports can individually auto-detect the speed of the inserted xcvr. Not applicable to the 24XF (1G/10G) model. See the <i>Installation Guide</i> for details.

	■ JL711A/JL711 Power-to-Port model 8360 48Y6C models ■ JL719C displayed by CLI (show system) ■ JL704C(v2) Port-to-Power model (FB) ■ JL705C(v2) Power-to-Port model (BF)		
Aruba 8400X Modules	JL363A JL687A	10.00.0018 10.04.2000	JL563A/JL563B does not support 1G operation; only 10G. It is only supported in ports 1 - 12. A maximum of 12 JL563A/JL563B transceivers can be used in the JL363A module. The JL687A 32p 25G module can support the use of the JL563A/JL563B transceiver in all 32 ports. The JL687A module requires configuration of interface groups (groups of 4 ports) to enable the use of 1G or 10G transceivers / DACs in the SFP28 ports (Interface Groups default to 25G speed). See the <i>Installation Guide</i> for details.
Aruba 10000 48Y6C models	R8S96A displayed by CLI (<code>show system</code>) ■ R8P13A - 48Y6C FB bundle ■ R8P14A - 48Y6C BF bundle	All 10000 models: JL563A is locked out of being used in this series JL563B: 10.10.0002	The JL563A (10GBase-T, A-Revision) transceiver is locked out of use in this series. (even with UT-mode) JL563B (B-revision) is supported in all SFP ports. NOTE: The CX 10000 requires configuration of interface groups (groups of 12 ports) to enable the use of 1G or 10G transceivers / DACs in the SFP28 ports. (Interface Groups default to 25G.)

SFP+ DAC cables

Figure 1 SFP+ DAC cable

Direct Attach over Copper (DAC) cables have a minimum bend radius of typically 4x the diameter of the cable (approximately a 1" bend radius). Handle DAC cables carefully to ensure that you do not crimp or bend the cable beyond a 1" radius; otherwise, you risk damaging the cable.

Aruba and other HPE DAC cables are passive devices. If your deployment calls for Active DACs, these are not compatible. If an Active DAC is required, an alternative is to use a 10G SR transceiver at both ends with the appropriate fiber cable between them.

Where support for a Revision A, B, or C transceiver existed, Revision D or E parts are also supported. Not all earlier revisions can be re-used on newer product: Check the tables below and compare the 4x4 number of the part to the list of supported 4x4 numbers. See [Identification of 4x4 part numbers](#) for more information.

Models, specifications, and compatibility

The specifications for Revision D transceiver products are the same as the specified Revision A, B, and C SKUs.

Table 46: Specifications for SFP+ DACs

Product name (SKU)	Cable length	Data rate
HPE X242 10G SFP+ to SFP+ 1m DAC Cable (J9281B) Aruba 10G SFP+ to SFP+ 1m DAC Cable (J9281D)	1 m (3.28 ft)	10 Gbps
HPE X242 10G SFP+ to SFP+ 3m DAC Cable (J9283B) Aruba 10G SFP+ to SFP+ 3m DAC Cable (J9283D)	3 m (9.84 ft)	
HPE X242 10G SFP+ to SFP+ 7m DAC Cable (J9285B) Aruba 10G SFP+ to SFP+ 7m DAC Cable (J9285D)	7 m (22.97 ft)	

10G 7m DACs require a PHY behind the SFP+ port to support >5m DAC technology. Switches with a note "or any type of 7m DAC is not supported" cannot support any type of 10G 7m DAC (even under Unsupported Transceiver mode). 5m DACs may work with Allow-Unsupported-Transceiver enabled.

The following DAC cables are offered by HPE Servers and Systems and ordered using the specified part number (these cables may not be available to order for Aruba-only partners). Refer to the [HPE Compute transceiver and cable hardware matrix product availability matrix](#) at hpe.com.

Table 47: Specifications for HPE SFP+ DACs (from HPE Server Products)

Product name (SKU)	Cable length	Data rate
HPE BLc 10G SFP+ SFP+ 3m DAC Cable (487655-B21)	3m (9.84 ft)	10 Gbps
HPE BLc 10G SFP+ SFP+ 5m DAC Cable (537963-B21)	5m (16.40 ft)	

Table 48: (AOS-Switch) Compatibility for the SFP+ DACs (and specifics for HPE Server cables)

Gigabit SFP optical transceiver modules

In December 2017, Aruba introduced Revision D versions of 100M, 1G, and 10G transceivers. Revision D products are structured to be specific alternative vendors as sources for the SKU#. Earlier Revision A, B, or C product may have alternative vendors that we no longer actively ship, but remain as fully supported in earlier and current products.

Some switch products will be specifying Revision D transceivers for full support, while other products may support earlier (older) revision transceivers – and some with specific 4x4 part numbers (see [Identification of 4x4 part numbers](#) for information regarding 4x4 part numbers).

Always refer to the Datasheet or QuickSpecs for the Switch product to see the current list of supported transceivers.

Figure 1 *Gigabit or 100-Megabit SFP optical transceiver module*

- Although a 10G SFP+ transceiver module has the same physical dimensions of a 1G SFP transceiver, a 10G transceiver will NOT operate in a 1G SFP port.
- Many, although not all, 10G SFP+ ports have support to use a 1G SFP transceiver (or even a 100Mbps FX SFP transceiver). See the QuickSpec for the Switch product and verify if the 1G or 100Mbps SFP transceiver is supported in the 10G SFP+ port.

Models, specifications, and compatibility

Gigabit SFP optical transceiver modules use LC connectors.

The specifications for Revision D transceiver products are the same as the specified Revision A, B, and C SKUs. Where support for a Revision A, B, or C transceiver existed, Revision D or E parts are also supported. Not all earlier revisions can be re-used on newer product: Check the tables below and compare the 4x4 number of the part to the list of supported 4x4 numbers. See [Identification of 4x4 part numbers](#) for more information.

Table 50: Specifications for Gigabit SFP optical transceiver modules (1)

Product name (SKU)	DOM - Digital Optical Monitoring (4x4 part #)	Central wl (nm)	Fiber mode	Fiber diameter (µm)	Modal bandwidth (MHz*km)	Transmission distance

100-Megabit SFP optical transceiver modules

Figure 1 Gigabit or 100-Megabit SFP optical transceiver module

Models, specifications, and compatibility

100 Megabit SFP optical transceiver modules use LC connectors. The 100FX transceivers enabled by Aruba Switches use an SGMII (Serial Gigabit MII) interface with 8B/10B encoding.

Other 100FX transceivers that use 4B/5B encoding cannot be enabled (even with UT-mode).

The specifications for Revision D transceiver products are the same as the specified Revision A, B, and C SKUs.

Gigabit BIDI optical transceiver modules

Gigabit BiDi transceivers are no longer offered by Aruba. The information presented here is for compatibility use.

Figure 1 Gigabit BIDI optical transceiver module

Models, specifications, and compatibility

Gigabit BIDI optical transceiver modules provide a transmission rate of 1,250 Mbps and use LC connectors.

- The J9142B/J9143B were End of Sale in April 2016 and are no longer available. Older J9142B/J9143B transceiver may work in switches using the "allow-unsupported-transceiver" feature. Consult your Aruba Sales team for alternative solutions. The information presented here is for compatibility use.
- BIDI optical transceiver modules use different central wavelengths in transmit and receive directions to implement bidirectional transmission of fiber signals over the same fiber.
- Use the HPE X122 1G SFP LC BX 10-D Transceiver (J9142B) and HPE X122 1G SFP LC BX 10-U Transceiver (J9143B) in pairs: a J9142B (-D = downlink) at one end of the connection and a J9143B (-U = uplink) at the other.

Table 56: Specifications for Gigabit BIDI optical transceiver modules

Product name (SKU)	DOM - Digital Optical Monitoring (4x4 part #)	Central wavelength (nm)		Fiber mode	Fiber diameter (μm)	Transmission distance

Aruba now supports select HPE Server and Systems interconnect products.

- This chapter summarizes the various interconnect products tested and verified to work with selected Aruba switches. NOT all Aruba switches are certified with HPE Server and Storage Systems products
- The term “HPE” products covers interconnect products sold by the HPE Servers and Systems division or HPE Storage Division. Aruba is a separate division within HPE.
- Aruba products are NOT the same as HPE products of the same speed support. They have different ordering part numbers and in many instances are of slightly different designs, requiring specific changes to the software drivers on either Switch or HPE Interconnect product (network adapters, or host-native ethernet port). For example, both divisions may sell a 10G DAC cable. However, the part incorporates an encoded part number specific for either Aruba or HPE and they are not the same. Steps must be taken to provide specific ‘tuning’ to allow the slightly different parts to provide proper support.
- Aruba has taken measures to add selected HPE products, and these HPE products are covered in each of the chapters of this guide – depending on the speed of product.
- An HPE only partner is not authorized to purchase Aruba Product Line SKUs, likewise, an Aruba only partner is not authorized to purchase HPE Server and Storage SKUs.
 - To allow HPE Resellers to quote Aruba specific switches and interconnect products, a different set of SKU (stock keeping unit) ordering numbers have been created. This set of SKU #s point to an Aruba part. The 1:1 relationship of these part numbers is covered later in this chapter.
 - The support of Aruba parts are covered in this Guide,
 - Support coverage of the HPE ordering SKU for a particular HPE Server product is covered by the information contained in this document at hpe.com: [HPE Compute transceiver and cable hardware matrix product availability matrix](#).
 - Support information for HPE product ordering SKU #s for a particular HPE Storage products are covered by the [SPOCK](#) (Single Point of Connectivity Knowledge for HPE Storage Products) – requires an HPE Passport Login account to access. Search for “Aruba” on the SPOCK Home page.

Support of HPE products includes interoperability of HPE products with the following Aruba switches:

- Aruba 6300M 48G Pwr2Prt 2F 1PS Bundle (JL762A) -- used as an Out Of Band Management (OOBM) 1G switch, usually to connect server ILO ports to the network. Other 6300M (or F) series are not in particular the focus of pairing with HPE Servers and Systems.
- Aruba 8320, 8325, 8360 and 10000 series. Purchased in either Front-to-Back or Back-to-Front airflow pre-configured bundles. The ‘bundles’ are ordered with a particular SKU (stock keeping unit) part number, but each are comprised of the same base switch model – (with a different SKU #).

817738-B21	HPE Ethernet 10Gb 2-port 562T Adapter

Table 5: HPE DACs, breakout DACs, AOCs, and breakout fiber cables

Cable Type	HIT SKU #	Description
Same speed DACs and AOCs		
25G to 25G	844477-B21	HPE 25Gb SFP28 to SFP28 3m DAC
	844480-B21	HPE 25Gb SFP28 to SFP28 5m DAC
10G to 10G	487655-B21	HPE BLc 10G SFP+ SFP+ 3m DAC Cable
	537963-B21	HPE BLc 10G SFP+ SFP+ 5m DAC Cable
Breakout DACs and AOCs		
100G to 4x25G DAC	845416-B21	HPE 100G QSFP28 to 4x25G SFP28 3m DAC
100G to 4x25G AOC	845420-B21	HPE QSFP28 to 4x25G SFP28 7m AOC
	845424-B21	HPE QSFP28 to 4x25G SFP28 15m AOC
100G to 4x25G DAC	845416-B21	HPE 100Gb QSFP28 to 4x25Gb SFP28 3m DAC
40G to 4x10G DAC	721064-B21	HPE BLc 40G QSFP+ to 4x10G SFP+ 3m DAC Cbl
40G to 4x10G AOC	721076-B21	HPE BLc QSFP+ to 4x10G SFP+ 15m AOC
Breakout Fiber cables (see breakout optical cables)		
MPO to LC use with 40G	R1N86A	HPE 12 Fiber MPO to 4xLCMM 3m Cbl
SR4/eSR4 or 100G SR4 transceivers	K2Q46A	HPE MPO to 4 xLC 5m Cable
	K2Q47A	HPE MPO to 4x LC 15m Cable

Other HPE cables not listed have not been validated against any Aruba Switch. Check the compatibility tables in this guide to determine if a HPE Server Cable is supported for use with the Aruba Switch.

Aruba Data Center Networking Solution for HPE

The table below shows the HPE SKU and Description, and its like-for-like Aruba SKU and Description. An HPE SKU is used by customers who were sold Aruba products as part of their HPE solution, while an Aruba SKU is used by customers who were sold Aruba products as part of an Aruba solution. Both, HPE SKU and Aruba SKU, are the same as shown in the table. Support and Serial Number information will be registered under the Aruba SKU.

Updates to this Transceiver Guide can be found on asp.arubanetworks.com searching for "Transceiver Guide" or at [this static link](#).

See details within this guide for specific supported switches and port restrictions.

Overview Chapter:

- Unsupported Transceiver mode (UT-Mode) see section in Chapter 1 regarding expanded support for speeds above 10G

AOS-CX updates:

Now reflecting support for up to the CX 10.10 and 10.09.10xx releases

- Addition of 8360 v2 models (100G, 40G, 25G 10G, 1G sections)
- Correction to the Part Number for the HPE 100Gb QSFP28 Bidirectional XCVR (845972-B21)
- CX 10000 series added full support for the following speeds (see chapters for specifics): 100G, 40G, 25G, 10G and 1G. Also corrected min software version for the 10000 Series is 10.10.0002.
- 50G DACs (R0M46A, R0M47A) and SR XCVR (R0M48A): support on 8360 v2 models (Revision C SKUs), 6400 v2 R0M44C module and other 6400 modules with SFP56 ports
- A new chapter for 50G SR XCVR (R0M48A) supported on 8360 v2 models, 6300 models, 6400 v2 R0M44C(not R0M44A) module and other 6400 v1 & V2 modules with SFP56 ports
- 10GBASE-T (JL563B) 100m MMF XCVR added (orderable in May, 2022), replacing the JL563A part (some models did NOT support JL563A, but will support JL563B)
- Addition of four new 6300 Models, two of which now support use of the 10G LRM transceiver (J9152D). All other CX switches do NOT support 10G LRM transceivers(not even in UT-mode) - except the 8400 JL363A 32p SFP+ module.

AOS-Switch updates:

- No new transceivers added since Edition 11.

Support for HPE Servers and Systems products:

- For HPE SERVER division products (adapters and interconnect products), refer to the [HPE Compute transceiver and cable hardware matrix product availability matrix](#) at hpe.com
- Addition of ordering SKUs to be used by HPE Server and Storage resellers to correspond to Aruba products (only the Xcvrs and interconnects are covered in this XCVR Guide. See other resources for HPE SKUs corresponding to Aruba Switches and accessories.

Airheads social forums and Knowledge Base	https://community.arubanetworks.com/
Software licensing	https://lms.arubanetworks.com/
End-of-Life information	https://www.arubanetworks.com/support-services/end-of-life/
Aruba software and documentation	https://asp.arubanetworks.com/downloads

Accessing updates

You can access updates from the Aruba Support Portal or the HPE My Networking Website.

Aruba Support Portal

<https://asp.arubanetworks.com/downloads>

If you are unable to find your product in the Aruba Support Portal, you may need to search My Networking, where older networking products can be found:

My Networking

<https://www.hpe.com/networking/support>

To view and update your entitlements, and to link your contracts and warranties with your profile, go to the Hewlett Packard Enterprise Support Center **More Information on Access to Support Materials** page:

<https://support.hpe.com/portal/site/hpsc/aae/home/>

Access to some updates might require product entitlement when accessed through the Hewlett Packard Enterprise Support Center. You must have an HP Passport set up with relevant entitlements.

Some software products provide a mechanism for accessing software updates through the product interface. Review your product documentation to identify the recommended software update method.

To subscribe to eNewsletters and alerts:

<https://asp.arubanetworks.com/notifications/subscriptions> (requires an active Aruba Support Portal (ASP) account to manage subscriptions). Security notices are viewable without an ASP account.

Warranty information

To view warranty information for your product, go to <https://www.arubanetworks.com/support-services/product-warranties/>.

Regulatory information

To view the regulatory information for your product, view the *Safety and Compliance Information for Server, Storage, Power, Networking, and Rack Products*, available at <https://www.hpe.com/support/Safety-Compliance-EnterpriseProducts>

Additional regulatory information

Aruba is committed to providing our customers with information about the chemical substances in our products as needed to comply with legal requirements, environmental data (company programs, product recycling, energy efficiency), and safety information and compliance data, (RoHS and WEEE). For more information, see <https://www.arubanetworks.com/company/about-us/environmental-citizenship/>.

Documentation feedback

Aruba is committed to providing documentation that meets your needs. To help us improve the documentation, send any errors, suggestions, or comments to Documentation Feedback (docsfeedback-switching@hpe.com). When submitting your feedback, include the document title, part number, edition, and publication date located on the front cover of the document. For online help content, include the product name, product version, help edition, and publication date located on the legal notices page.
